

Honda School of dreams Case Study

from Network and Cabling Solutions

Network and Cabling have teamed up with Magenta Project Management Ltd to make their data collection easier

Magenta Project Management Ltd approached Network and Cabling at the Education Show 2008 after attending a demonstration of Promethean's Activote. They were amazed at how easily Activote could be used to collect evaluation data and felt the design, functionality and fun element would compliment the projects they have developed.

What is the Honda School of Dreams?

The Honda School of Dreams two day interactive workshop is aimed at pupils and teachers to help inspire young people to believe and develop an understanding of the importance of pursuing their dreams.

Based in Key Stage 3 it gives everyone involved a chance to explore:

- thinking skills
- creativity
- problem solving
- team working

The Project

As part of the project Magenta handed out paper based evaluations to every participant at the beginning and end of each workshop. This was collated and manually entered into a spreadsheet for analysis. The process was complicated, time consuming and created a huge amount of paperwork.

The Results

Kim Neighbour, Project Manager from Magenta said "we have been using the Activote system in our workshops since October 2008, this has made the process of collecting data and analysis so much easier. This has reduced staff workload and has become an enjoyable experience for pupils all at a push of a button.

Looking forward to the future we are interested in integrating the use of the new learner response system from Promethean 'Activexpression' into the practical aspects of the workshop".
